Compression knee-high socks

Compression knee-high socks with graduated compression suitable for all hobbies and performance athletes. Ideal for maximum performance support. Muscle strengthening and Achilles tendon protection reduce the risk of injury. Reflective elements bring not only an attractive appearance but also greater safety when playing sports in poor visibility.

LOW-CUT and HIGH-CUT sports socks

LOW-CUT and **HIGH-CUT** sports socks. Thanks to the ergonomic shape, the socks fit perfectly and bring the athlete maximum comfort during any activity. The reinforcement of the foot part absorbs shocks and ensures the stability of the foot in the shoe. The knitted tire pattern activates the foot and thanks to tiny channels it better removes moisture and heat. Available in 7 colour options, 4 sizes and 4 types of cut.

BETTER & FASTER

Compression arm sleeves

Compression sleeves to support arm performance. Compression is targeted at the biceps and forearm muscles, with less compression in the elbow area and the material is thickened for a comfortable fit. Arm sleeves with their properties contribute to extending maximum performance, delaying fatigue and shortening recovery. They are thus suitable for all activities with active involvement of arms – volleyball, tennis, sport climbing, mountain biking, rowing, etc. Sufficiently wide top hem and seamless bottom hem prevent excessive strangulation. The quick-drying material can also be used for any water sports.

Compression thigh sleeves

Sleeves are designed so that compression is the strongest in the area of the thigh muscle, providing the athlete with a maximum support. The hem design is a result of many years of experience in the production of medical compression products. The hem is not too tight and thanks to a silicone dots layer, the sleeve holds firmly in place

TARGETED COMPRESSION

Compression calf sleeves

Compression calf sleeves are a functional sports accessory. They have excellent compression properties and many functional benefits. You can choose from a range of product lines: **ROYAL BAY Extreme** and **RACE**. In combination with LOW-CUT sports socks, the sleeves are an alternative to compression knee-high socks. Available in 11 colour options in 5 sizes, with targeted compression. When choosing the size of calf sleeves, the key parameter is the circumference of the calf at its widest point. The proper size is important for optimal compression performance.

Compression calf sleeves

The modern design of **ROYAL BAY Motion** sleeves brings a subtle concept of top compression sleeves with graduated compression for maximum support of athletic performance. Thanks to the strengthening, the muscle is protected from unwanted shocks (delaying of fatigue and prevention of injuries).

Compression shorts

ROYAL BAY Extreme compression shorts have integrated thigh sleeves with targeted compression on the thigh muscle. The main benefit is a highly breathable and quick-drying material that is comfortable to wear and evokes the feeling of so-called "second skin". The seating part is made of material that stretches in 4 directions, so the shorts fit every athlete. Sanitized® bacteriostatic treatment is a matter of course. Available in 4 sizes in men's and women's cuts.

Cotton compression knee-high socks

They are included in products suitable primarily for recovery after exercise or for travelling. Thanks to the 60% cotton content and a pleasant level of compression, they are also suitable for everyday wear

Medical compression

ROYAL BAY Therapy knee-high socks compression is a standardised type of graduated compression, the compression force in the ankle area corresponds to the compression class II (CCL 2, 23–32 mmHg).
